

iPhone Development

Description

In this five day course you will learn to develop mobile applications with the iOS mobile operating system for iPhones and iPads. You will learn to install and configure the IOS development environment, to write your first iPhone application, to use the various UI elements and controls, to use the framework's resources, and to store application data in persistent storage. A large selection of labs and demos will ensure that the skills you gain in the course will be transferable to your first iPhone application.

Intended Audience

Developers and team leaders with at least one year of active development experience in the any OO programming language.

Prerequisites
